SUMMARY

Self-taught full-stack engineer who builds production systems end to end and automates the manual work around them. In 2026 I shipped 10 projects with 550+ commits: a multi-tenant shuttle-management platform with Flutter apps and a routing engine, an iGaming platform with real-time multiplayer games and deposits verified automatically from SMS, and a browser extension that cut a 15-click call-center workflow to one click. I work AI-native: I write the spec, direct AI coding agents (Claude Code), review every change and back it with tests (175+ test files across my repositories). Two-plus years in B2B sales and operations mean I build what the business actually needs, and I can explain it to the people who use it.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL, Dart, Kotlin, HTML/CSS
- **Frontend & mobile:** React 19, Next.js 16 (App Router), Vite, Tailwind CSS, PWAs, Telegram Mini Apps, Flutter (Android/iOS), native Android (Kotlin)
- **Backend & data:** Node.js, Express 5, Socket.io, REST/OpenAPI, Prisma, PostgreSQL/PostGIS, SQLite, Redis, BullMQ, AWS S3
- **AI & automation:** Claude Code and AI coding agents, ChatGPT, prompt engineering, browser extensions (Manifest V3), Telegram bots, job schedulers and queues, SMS/webhook pipelines, Excel/CSV data pipelines
- **Security:** Argon2id, JWT with rotating refresh tokens, HMAC-signed webhooks, RBAC, row-level security, OTP login, rate limiting
- **Delivery:** Git/GitHub, Vitest, ESLint, Docker Compose, Vercel, Railway, Render, Neon, Cloudflare Tunnels

SELECTED PROJECTS

Derash: Employee Shuttle Management Platform | built for an MMCY Tech pilot — **Oct 2026**

TypeScript • Express 5 • PostgreSQL/PostGIS • Redis/BullMQ • Socket.io • React PWA • Flutter

- Built a multi-tenant platform that gets employees home after shifts: dispatcher dashboard, rider and driver apps (Flutter, Android/iOS) and a provider console, in English and Amharic with Ethiopian time.
- Wrote a deterministic assignment engine: k-means zone clustering, smallest-vehicle fit, trip consolidation and nearest-neighbour + 2-opt route ordering, with incremental re-planning for absent drivers and breakdowns.
- Automated the whole shift lifecycle (T-60 / T-15 / T-5 autopilot) and a push → Telegram → SMS notification cascade with delivery receipts; live GPS tracking over Socket.io.
- Production API with row-level-security tenancy, rotating refresh tokens, audit log, idempotency keys and rate limits; 49 test files including an end-to-end shift-end flow.

Dialer Assistant: Call-Center Browser Automation | used daily at MMCY Tech — **Oct – Nov 2026**

JavaScript • Edge/Chrome Manifest V3 extension • SheetJS • Zoiper softphone integration

- Turned a manual shareholder-call workflow into one click: imports an Excel phone → control-number file, finds the caller instantly, and runs a three-pass disposition workflow on its own (~15 manual clicks per call before).
- Receives the caller's number straight from the Zoiper softphone; automates scheduled breaks and clock in/out, and keeps working with the screen locked using background alarms.

Gebeta Gaming Platform: iGaming & Real-Time Game Development | in production — **Aug – Oct 2026**

Next.js 16 • TypeScript monorepo • Express • Socket.io • PostgreSQL/Prisma • Redis • Kotlin • Canvas • Telegram Bot API

- Built an iGaming product line for the Ethiopian market across four codebases (190+ commits, 130 test files): phone-first players, one ETB wallet, real-time multiplayer games inside Telegram, and 3,000+ third-party titles.
- Game development: real-time multiplayer rooms on Socket.io with SHA-256 committed (provably fair) draws and automatic win detection, plus 10 canvas-rendered browser games with a lobby, live chat and per-game RTP controls.
- Wallet core: append-only double-entry ledger with exact decimal/BigInt money and per-wallet row locks that stop concurrent double-spends; JWT rotation with theft detection and RBAC across player, admin, agent and partner portals.
- Automated deposit verification: a Kotlin Android app forwards payment SMS, and the server matches and credits deposits on its own. Integrated a game aggregator with HMAC-verified, idempotent callbacks.

Tebiban School: Ethiopian Music E-Learning Platform — **Jun – Nov 2026**

Next.js 16 • TypeScript • Prisma 7 • PostgreSQL (Neon) • Resend • Vercel

- Migrated the platform from Supabase to a server-first Prisma architecture with self-hosted authentication (Argon2id, signed httpOnly sessions, Google sign-in). Fixed 7 security issues along the way, including a committed service-role key and a client-side admin-escalation path.

More 2026

- DawitType: Amharic/English typing trainer for the 151 Psalms with Amharic keyboard mappings and synthesized sound (React, Vite). • Startup Task Tracker (Next.js, Supabase auth). • SDR portfolio site (deployed on Vercel).

EXPERIENCE

Business & Sales Development Representative | MMCY Tech **Apr 2024 – Present**

- Built the Dialer Assistant to automate repetitive call-center work for my team, and proposed and prototyped the Derash shuttle platform for MMCY's employee transport.
- Run B2B outbound (150–250+ dials a day), demos and proposals for MMCY's software and IT services.

Sales Development Representative (Part-time) | 3BL Studios **Jun – Oct 2026**

- First sales hire. Built the sales function from scratch and automated its busywork: lead-list cleanup, CRM workflows, follow-up triggers and activity reporting.

IB Computer Science TA & Tech Support | SOS Hermann Gmeiner International College, Ghana **Aug 2022 – Jun 2023**

- Taught programming to IB DP/MYP students and ran the Programming & Robotics Club; maintained servers, LAN, laptops and AV systems, and supported users in person and remotely.

Earlier 2021 – 2024

- Assistant Business Developer (EAFMG); Marketing Specialist (Empire Syndicate, U.S.); co-founder of two ventures; CFO & AV Production Manager of an African Leadership Academy student enterprise.

EDUCATION & LANGUAGES

Advanced Diploma | African Leadership Academy, Johannesburg 2022

High School Diploma | Bahir Dar STEM Center, Ethiopia 2020

Self-taught software engineering through building and shipping real products. • Languages: English (C1), Amharic (native)
